# Extract a table. Check the result.

Fictional service usage. These are synthetic records, not production data.

The page contains selectable text. No OCR is required for this example.

| Service | Requests | Errors |
|---|---|---|
| Search | 1200 | 2 |
| Export | 240 | 4 |
| Preview | 60 | 1 |
| Total | 1500 | 7 |

## Extraction requirements

1. Return three service records with source_page = 1.
2. Keep the Total row separate from the service records.
3. Reconcile 1,500 requests and seven errors with the extracted data.
4. Preserve the original PDF and report any uncertain values.

Created with ReportLab; extracted with pdfplumber. This is an editorial fixture, not an upstream Skill benchmark or a test of scanned-page OCR.
